

CONCAST LAUNCHES NEW WEB SITE

Features include easier navigation, expanded information and the latest product offerings

Mars, PA – Feb. 22, 2010 – Concast Metal Products Co. announced today the launch of its newly redesigned Web site (www.concast.com). The improved site allows users to easily navigate through a wealth of information, including specification sheets, cross reference charts, tolerance sheets and size schedules, among other items.

“Our Web site often serves as the first point of contact for our customers. Therefore, we challenged ourselves to create an interactive portal and resource for customers to learn about our products and services,” says Al Barbour, President and CEO of Concast. “We recently expanded our product offering to include a wider range of wrought products, which are now showcased within our site along with our standard and custom cast products.”

A drop down menu box gives users the ability to immediately advance to the specification sheet for any alloy. The new site also includes a “request a quote” link. Concast will supply quotes on any special size, shape or alloy requirement. “There’s no better time to launch our new Web site. We have much to unveil in 2010. Our new site is only the beginning,” says Barbour.

About Concast

For nearly 50 years, Concast has been producing specialty copper based alloys in two locations – Mars, Pennsylvania and Birmingham, Ohio. Concast is an industry leader as a single-source supplier, offering both leaded bronze and aluminum bronze products to its customers, and most recently, wrought mill products. For more information, visit www.concast.com.
